How To: Disconnect from FSDNET WiFi and re-establish the connection

Step 1: For connecting to FSDNET, in most cases, the user may just be prompted with a "Connect" and/or "Continue Connecting" (see pictures) and choosing "Connect" should re-accept the certificate. This would only occur on the first connection (until the certificate expires again next year). In some cases it may be necessary to "Forget" the network and then re-connect to FSDNET.

Continue connecting?
If you expect to find FSDNET in this location, go
ahead and connect. Otherwise, it may be a
different network with the same name.
